

*A World Elegance
for Today's World*

Journey Back to the Old Country

Ultratex Granites are created with a unique new process that reconstructs granite aggregates into ultra high strength paving units to provide the aesthetics and durability required for sophisticated projects. The human scale and subtle color palette make this an ideal system for plazas, streetscapes and residential applications.

The patterns and colorations of Ultratex Granites offer virtually unlimited design opportunities to enhance any style architecture from Traditional to New Age.

Ultratex offers an Old World appearance in Granite Aggregate for lifetime color and texture. Exposed granite points create a subtle contrast with the natural palette of colors found in the base surface. Ultratex is available in three shapes to form unique configurations. The five colors in the Ultratex product line can be mixed and matched in patterns and borders.

When Ultratex Granites are installed, the effect is one of subtle quality and pleasing

Slate Green and Cotswold Stone

Cotswold Stone and Waucan Brown Granite

Red Granite and Pewter Granite

Pewter Granite and Waucan Brown Granite

Waucan Brown Granite and Slate Green

Colors and texture create the rich, elegant look of Ultratex, but the beauty is an added feature to the durability and practicality of this product line. The colors in Ultratex will be as true in 20 years as the day the pavers are installed. The exposed granite wear surface of the pavers, protects the natural base color and texture of the matrix. The practical side of the Ultratex product line consists, not only, of its color retention and durability, but the added safety feature of skid-resistance.

Available in 3 Different Shapes.
